Verilog, standardized as IEEE 1364, is a hardware description language (HDL) used to model electronic systems. It is most commonly used in the design and verification of digital circuits at the register-transfer level of abstraction. It is also used in the verification of analog circuits and mixed-signal circuits, as well as in the design of genetic circuits.

SNUG Silicon Valley 2013 3 Synthesizing SystemVerilog 1.0 Introduction – debunking the Verilog vs. SystemVerilog myth There is a common misconception that –Verilog– is a hardware modeling language that is synthesizable, and –SystemVerilog– is a verification language that is not synthesizable. That is completely false!

SystemVerilog, standardized as IEEE 1800, is a hardware description and hardware verification language used to model, design, simulate, test and implement electronic systems. SystemVerilog is based on Verilog and some extensions, and since 2008 Verilog is now part of the same IEEE standard. It is commonly used in the semiconductor and electronic design industry as an evolution of Verilog.

A Modern Approach To Verbal & Non-Verbal Reasoning is of great use to students preparing for a number of entrance examinations, whether it be for an MBA or for a job in the Civil Services. It will also be useful for students writing exams to get jobs in banks, the tax department and the railway department.
