hyperparasite systems as models of biological control in a disturbed environment, where the host " parasite interactions are discontinuous. One model is a parasite "hyperparasite system designed to

(PDF) Biological control in a disturbed environment

Biological control is the beneficial action of parasites, pathogens, and predators in managing pests and their damage. Biocontrol provided by these living organisms, collectively called "natural enemies," is especially important for reducing the numbers of pest insects and mites.

Biological Control and Natural Enemies of Invertebrates

Although the Manual deals principally with environmental management for the control of mosquito vectors, many of the works and operations described can be effectively used against certain other vectors.
