In computer science, a stack is an abstract data type that serves as a collection of elements, with two principal operations: . push, which adds an element to the collection, and; pop, which removes the most recently added element that was not yet removed.; The order in which elements come off a stack gives rise to its alternative name, LIFO (last in, first out).

In computer science, a disjoint-set data structure (also called a union“find data structure or merge“find set) is a data structure that tracks a set of elements partitioned into a number of disjoint (non-overlapping) subsets. It provides near-constant-time operations (bounded by the inverse Ackermann function) to add new sets, to merge existing sets, and to determine whether elements are ...
