The High-Resolution Site Characterization (HRSC) Focus Area reflects the state-of-the-science for environmental site characterization. HRSC strategies and technologies use scale-appropriate measurement and data density to delineate contaminant distributions in environmental media with greater certainty, supporting faster and more effective remedy selection, design and implementation.

Ultra efficient performance – Enabling that last piece of functionality in the smallest possible space is critical. That's why you need the LatticeECP3's 150 k LUTs. Maximize reliability, minimize cost and power – With SERDES on-chip and power consumption starting below 0.5 W, LatticeECP3 FPGAs let you improve reliability and lower the cost of industrial, telecom or automotive ...

Drug design, often referred to as rational drug design or simply rational design, is the inventive process of finding new medications based on the knowledge of a biological target. The drug is most commonly an organic small molecule that activates or inhibits the function of a biomolecule such as a protein, which in turn results in a therapeutic benefit to the patient.

An Application-Specific Integrated Circuit (ASIC / ˈeɪsɪk /) is an integrated circuit (IC) customized for a particular use, rather than intended for general-purpose use. For example, a chip designed to run in a digital voice recorder or a high-efficiency bitcoin miner is an ASIC. Application-specific standard products (ASSPs) are intermediate between ASICs and industry standard ...

For practical applications, the 3D-printed parts should withstand various amounts of mechanical and environmental stresses during its use. It is important to know the required strengths for each application under various loading conditions, and at the very least, the physical properties of 3D-printed parts should be similar to those manufactured by traditional methods, such as injection ...
