The general theory contains the introduction (i.e., the definition) of fundamental concepts among which: field and substance, electric charge, electric current, state quantities of electric and magnetic fields, as well as the study of laws and energy of the electromagnetic field. The general theory is presented in four chapters.

An electromagnetic field (also EMF or EM field) is a physical field produced by electrically charged objects. It affects the behavior of charged objects in the vicinity of the field. The electromagnetic field extends indefinitely throughout space and describes the electromagnetic interaction.
