Elementary algebra is the most basic form of algebra. It is taught to students who are presumed to have no knowledge of mathematics beyond the basic principles of arithmetic. In arithmetic, only numbers and their arithmetical operations (such as  $+$ ,  $-$ ,  $\times$ ,  $\div$ ) occur. In algebra, numbers are often represented by symbols called variables (such as  $a$ ,  $n$ ,  $x$ ,  $y$  or  $z$ ).

In mathematical analysis and in probability theory, a  $\sigma$ -algebra (also  $\sigma$ -field) on a set  $X$  is a collection  $\mathcal{F}$  of subsets of  $X$  that includes  $X$  itself, is closed under complement, and is closed under countable unions (the definition implies that it also includes the empty subset and that it is closed under countable intersections). The pair  $(X, \mathcal{F})$  is called a measurable space or Borel space.
