Design and Simulation of Two Way Power Divider in S Band

Cartesian Co-ordinate System : A point $P(x, y, z)$ in Cartesian co-ordinate system is represented as intersection of three planes $x = \text{constant}$, $y = \text{constant}$ and $z = \text{constant}$, as shown in the figure below. The unit vectors along the three axes are as shown in the figure. Coordinate system represented by (x,y,z) that are three orthogonal vectors in straight lines that intersect at

(6TH SEMESTER) ELECTROMAGNETIC THEORY (3-1-0) MODULE-I (10

With its strong pedagogy, superior readability, and thorough examination of the physics of semiconductor material, Semiconductor Physics and Devices, 4/e provides a basis for understanding the characteristics, operation, and limitations of semiconductor devices. Neamen's Semiconductor Physics and Devices deals with the electrical properties and characteristics of semiconductor materials and ...

Semiconductor Physics And Devices: Basic Principles

In electronics, impedance matching is the practice of designing the input impedance of an electrical load or the output impedance of its corresponding signal source to maximize the power transfer or minimize signal reflection from the load.. In the case of a complex source impedance Z_S and load impedance Z_L , maximum power transfer is obtained when $Z_L = Z_S^*$ where the asterisk indicates the ...

Impedance matching - Wikipedia

Electrostatics is a branch of physics that studies electric charges at rest.. Since classical physics, it has been known that some materials such as amber attract lightweight particles after rubbing.The Greek word for amber, ἤλεκτρον, or electron, was the source of the word 'electricity'.Electrostatic phenomena arise from the forces that electric charges exert on each other.
