Modeling of Mechanical (Lumped Parameter) Elements The fundamental components of a mechanical system are: masses or inertias, springs (stiffnesses), and dampers. Lumped elements lead to ordinary differential equations of motion describing the system dynamical behavior. Each mechanical element has a particular function within the mechanical system:

Mechatronics Physical Modeling - Mechanical K. Craig 2. Each of the elements has one of two possible energy behaviors: " stores all the energy supplied to it " dissipates all energy into heat by some kind of "frictional" effect. Spring stores energy as potential energy Mass stores energy as kinetic energy Damper dissipates energy into heat.
