A review of polymer electrolyte membrane fuel cells: Technology, applications, and needs on fundamental research

A review of polymer electrolyte membrane fuel cells

In physiology, dehydration is a deficit of total body water, with an accompanying disruption of metabolic processes. It occurs when free water loss exceeds free water intake, usually due to exercise, disease, or high environmental temperature. Mild dehydration can also be caused by immersion diuresis, which may increase risk of decompression sickness in divers.

Dehydration - Wikipedia
