Testplan - Wikipedia

Test plan is the project plan for the testing work to be done. It is not a test design specification, a collection of test cases or a set of test procedures; in fact, most of our test plans do not address that level of detail. Many people have different definitions for test plans.

What is the purpose and importance of test plans in

One way to keep the records of test progress information is by using the IEEE 829 test log template. While much of the information related to logging events can be usefully captured in a document, we prefer to capture the test-by-test information in spreadsheets (see Figure 5.1).

2.1. Capacitive tactile sensors. A capacitive sensor consists of two conductive plates with a dielectric material sandwiched between them. For parallel plate capacitors, capacitance can be expressed as, $C = \frac{\epsilon_0 \epsilon_r A}{d}$. Where C is the capacitance, A is the overlapping area of the two plates, ϵ_0 is the permittivity of free space, ϵ_r is the relative permittivity of the dielectric material ...
