In electronics, ring modulation is a signal-processing function, an implementation of frequency mixing, performed by multiplying two signals, where one is typically a sine wave or another simple waveform and the other is the signal to be modulated. A ring modulator is an electronic device for ring modulation. A ring modulator may be used in music synthesizers and as an effects unit.

The cavity magnetron is a high-powered vacuum tube that generates microwaves using the interaction of a stream of electrons with a magnetic field while moving past a series of open metal cavities (cavity resonators). Electrons pass by the openings to these cavities and cause radio waves to oscillate within, similar to the way a whistle produces a tone when excited by an air stream blown past ...

February 2, 2008 E. Rubiola Tutorial on mixers 5 1 Basics It is important to be understood that the mixer is mainly intended, and mainly documented, as the frequency converter of the superheterodyne receiver (Fig. 1). The port names, LO (local oscillator, or pump), RF (radio-frequency), and IF (intermediate frequency) are clearly inspired to this application.
